Professional Experience

S2M — Casablanca

Mar–Aug 2025

Final-year internship — AI-based fraud detection

Developed a fraud detection module using unsupervised learning. Implemented and compared Isolation Forest, Autoencoder and K-Means approaches. Prepared and transformed banking transaction data in ISO 8583 format. Developed and deployed a REST API to integrate the model into a decentralized banking architecture.

Technologies: Python, Scikit-learn, TensorFlow/Keras, Pandas, REST APIs, ISO 8583

Carrelage Gharnata — Casablanca

Dec 2023–Feb 2024

Freelance project — Inventory, invoicing and payment management

Developed an inventory and sales management application supporting partial and full payments, automated invoicing and financial tracking of transactions.

Technologies: Spring Boot, Thymeleaf, Bootstrap, MySQL

Faculty of Letters and Humanities — Tétouan

Apr–Jun 2023

Internship — Baccalaureate certificate collection system

Developed a web application to digitize the process of collecting baccalaureate certificates and the associated administrative workflows.

Technologies: Spring Boot, Thymeleaf, Bootstrap, MySQL

CDMA Solutions — Casablanca

May–Jun 2022

Internship — Dynamic website development

Developed a responsive website with a contact form and customer management features.

Technologies: Laravel 9, Bootstrap, MySQL

Al Akhawin Bilal Hotel — Khouribga

Jul–Aug 2021

Internship — Hotel website

Developed a responsive informational website showcasing the hotel's services and contact details.

Technologies: HTML, CSS, Bootstrap

Education

Master's Degree in Software Quality

2023–2025

Faculty of Sciences — Tétouan

Bachelor's Degree (Licence) in Network Administration and Information Systems Security

2022–2023

Faculty of Sciences — Tétouan

Higher Technician Diploma (BTS) in Information Systems Development

2020–2022

Moulay Ismail High School — Meknès

Baccalaureate in Physical Sciences

2018–2019

Al Mouahidine High School — Khouribga

Academic Projects

Squid HTTP Caching Server

2023–2024

Network optimization

Installed and configured a Squid server to optimize bandwidth usage and reduce latency.

Technologies: Linux, Squid Proxy

Person Detection

2023–2024

Computer vision

Designed and developed a person detection system for security and analytics applications.

Technologies: Python, OpenCV, NumPy

Distributed Task Allocation

2023–2024

Client-server application

Implemented a master-worker architecture for efficient task allocation.

Technologies: Java, sockets

Hotel Management System

2022–2023

Full-stack application

Developed a system for managing reservations, invoicing and internal operations.

Technologies: Spring Boot, Thymeleaf, Bootstrap, MySQL

BTS Student Attendance Tracking

2020–2022

BTS final-year project

Built an integrated platform to streamline student attendance tracking.

Technologies: Laravel 9, Bootstrap, MySQL
